

RAINWELL RFD

The smarter rainwater diverter for rainwater tanks, garden irrigation, ponds and swimming pools.

- Self-cleaning filtration
- Mosquito prevention
- Improves water quality
- Reduces maintenance
- Eliminates safety risks
- Prevents pipe blockages
- Protects waterways
- Avoids water loss & flooding
- Inhibits algae growth
- Installation savings
- Easy-to-install
- BlueScope steel construction
- 1 year warranty
- Invented & made in Australia

Rainwater tanks

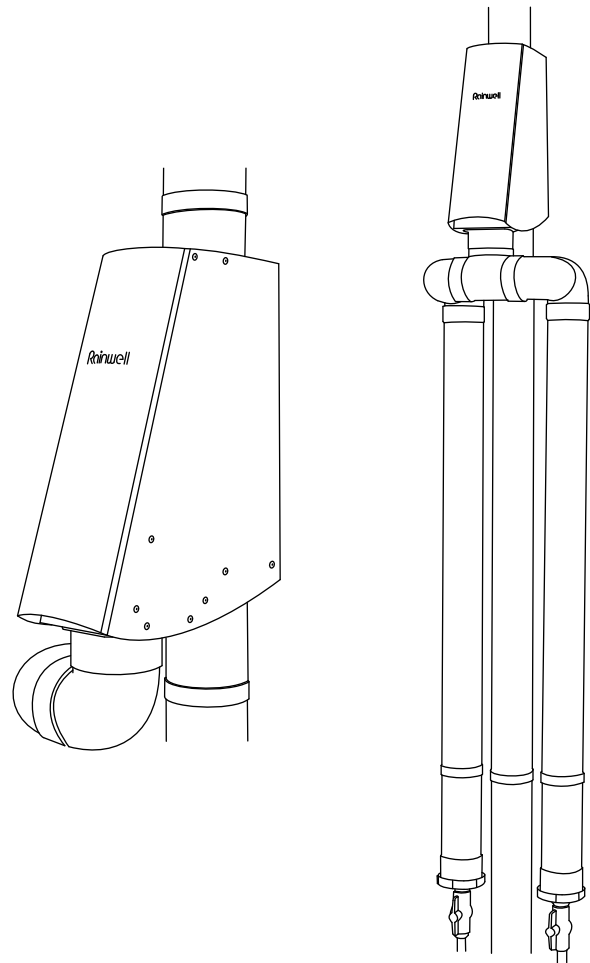

The Rainwell RFD's innovative filtering and diversion system creates better solutions to make rainwater tank ownership safer, easier and healthier.

It simply fits to a downpipe at the same level as the rainwater tanks overflow outlet to reduce and make maintenance safer and easier and provide superior mosquito prevention.

Rainwater tanks are breeding grounds for mosquitoes, and to prevent them from escaping and becoming a health hazard, mosquito-proof screens must be on all openings. Unfortunately, the traditional system requires regular maintenance to clean these screens, and when left, will block and cause water loss, property damage and ponding for more mosquito breeding sites. Maintenance may also require the use of a ladder and difficult procedures, which can be time consuming and dangerous.

The Rainwell RFD replaces this problematic mosquito-proof screening with two easy-lift-out, low-maintenance mosquito-proof screens in one readily accessible location. Also, the leaf-strainer opening can now be securely covered to prevent accidental entry and sunlight entering which promotes algae growth.

Rainwater tanks with an overflow outlet to the stormwater system are an environmental risk. If the storage water became contaminated, it can overflow to pollute our natural waterways. The Rainwell RFD overcomes this risk by isolating the storage water when the rainwater tank is full, and diverting filtered rainwater to our natural waterways.

The Rainwell RFD system replaces rainwater tank overflow plumbing with a single pipe connection to the rainwater tank, making it a simple and cost-effective solution for rainwater tank installation. Installation savings are further increased for remote rainwater tank positioning and multiple downpipe connection.

Also suitable for use with first flush diverters, bladder tanks & innovative rainwater tanks.

Garden irrigation, ponds and swimming pools

Simply connect a Rainwell Watertower to the Rainwell RFD and you can reduce mains water bills and improve your environment.

Filtered rainwater is diverted to garden irrigation pipes to increase soil moisture levels to sustain plants through extended dry periods, or to ponds and swimming pools to keep them topped up and fresh.
